RELEVANCE LAB · SOFTWARE ENGINEERING

Identity and Access Management (IAM)

The control layer that gives the right people the right access to the right resources at the right time.

Secure identity solutions, engineered for the enterprise.

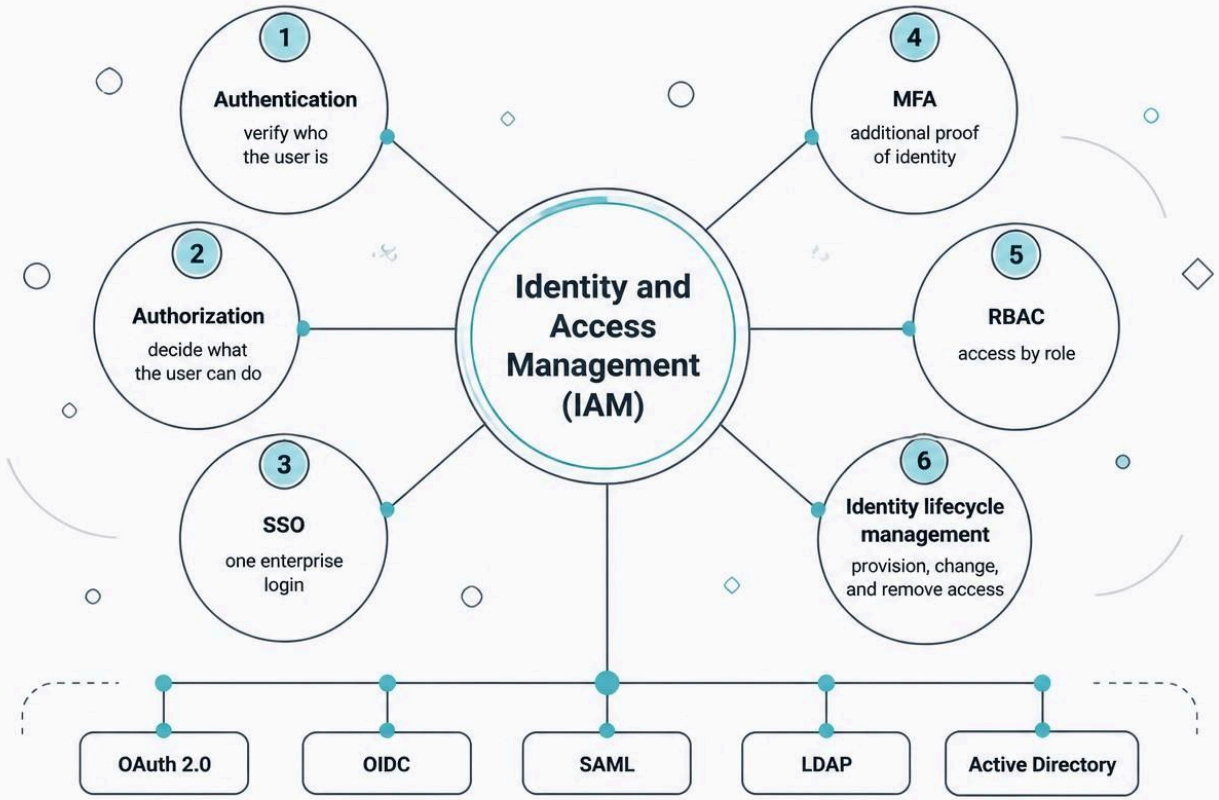

Made with GAMMA

THE IAM ECOSYSTEM

Identity becomes access through connected controls.

Each capability answers a different question — and the ecosystem makes them work together.

Identity, policy, protocol, and lifecycle are one operating system for access.

Made with GAMMA

THE SOFTWARE ENGINEER'S LIFECYCLE

Secure identity solutions are engineered end to end.

IAM work continues from service design through operational learning.

01

Develop IAM services

Build secure identity capabilities.

02

Integrate applications

Connect enterprise applications with identity providers.

03

Automate provisioning

Make access changes repeatable and governed.

04

Troubleshoot access

Resolve identity and authorization issues.

05

Test and document

Verify behavior and preserve operating knowledge.

06

Collaborate across teams

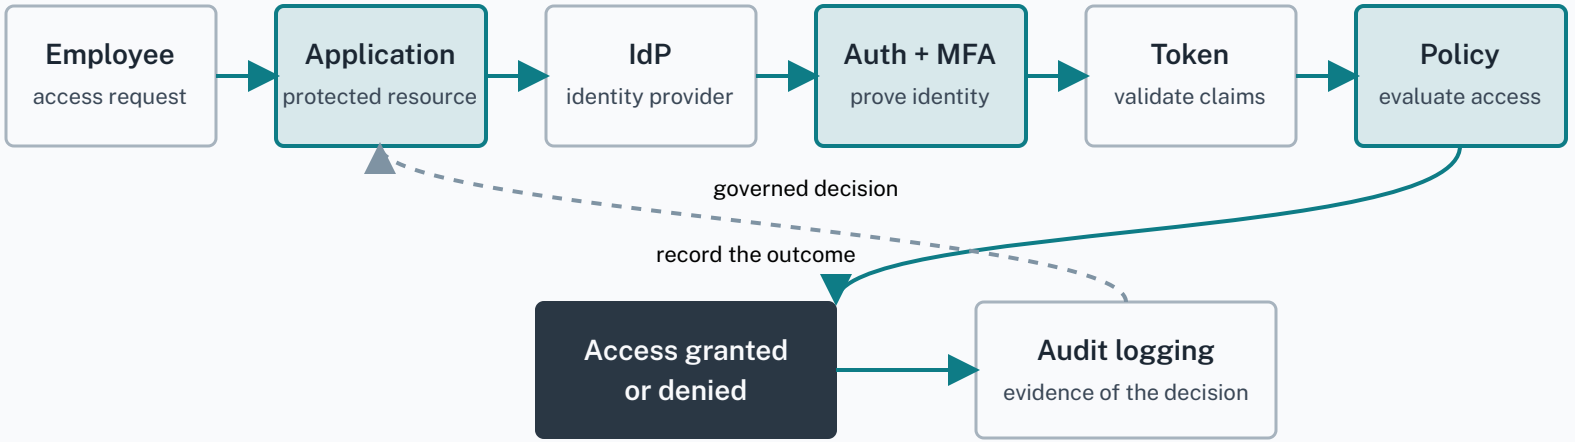

Work with security, DevOps, and product.

Made with GAMMA

FROM LOGIN TO DECISION

One enterprise login becomes a governed access decision.

The request moves through identity proof, policy, and evidence before the application responds.

Made with GAMMA

Secure identity is the foundation of a trusted digital enterprise.

IAM strengthens security, compliance, user experience, and automation.

Engineering challenges

Integrate complex environments, govern access, and keep identity services dependable.

What comes next

Zero Trust, passwordless authentication, AI-assisted detection, governance automation, and cloud-native IAM.
